

8-Port All-Optical Port Aggregation Switch

Article Overview

8-port aggregation switches with optical ports provide high-speed fiber connectivity, often supporting 10G SFP+ modules, link aggregation, and advanced Layer 2/Layer 3 management features.

Key Features

Port Configuration: Most 8-port optical aggregation switches come with 8 SFP or SFP+ ports, sometimes supplemented with additional SFP28 or RJ45 ports for uplinks or management . These ports support fiber optic modules for long-distance connections and can also accommodate copper RJ45 modules in some models .

Speed and Compatibility: These switches typically support 10G SFP+ connections, with some models offering multi-speed support such as 10G/2.5G/1G, allowing flexibility depending on the connected devices . Certain switches also support DAC (Direct Attach Copper) or AOC (Active Optical Cable) connections for short-range high-speed links .

Management and Features: Many 8-port optical switches are web-managed or Layer 2 managed, providing features like VLAN, QoS, Spanning Tree, MAC address management, DHCP client support, and link aggregation (static and dynamic, IEEE 802.3ad) . These features optimize network performance, security, and redundancy.

Applications: These switches are ideal for fiber-to-the-home (FTTH), fiber-to-the-build...
