

Applications of Armored Long-Distance Optical Cables

Overview

Armoured fiber cables are used wherever environmental conditions pose risks to ordinary cables. Here are some of their most common applications: Factories, refineries, and power plants use these cables to connect network systems in areas exposed to heavy machinery, chemicals, and. An armoured fiber cable is a reinforced optical cable designed with a protective metallic or non-metallic layer around the optical fibers. This armor shields the delicate glass fibers from physical damage such as rodent bites, crushing, moisture, and abrasion. We will explore what they are, how they are constructed, their key benefits, and the various applications where they excel. Unlike standard fiber optic cables, which are vulnerable to physical damage, armored optical cables are reinforced with a layer of protective material that shields the fibers. Armored fiber optic cables play a crucial role in modern telecommunications, providing a secure and reliable means of transmitting data over long distances.
