

Cable tray 300 to 500

Article Overview

Cable trays with widths from 300 mm to 500 mm are standard for medium to large cable installations, available in ladder, perforated, channel, and wire mesh types with various material and load options.

Standard Widths and Types

Cable trays in the 300–500 mm range are commonly used for industrial, commercial, and data center applications. Standard widths include 300 mm (12"), 400 mm (16"), 450 mm (18"), and 500 mm (20"). These widths are suitable for carrying multiple power, control, or communication cables while maintaining proper airflow and heat dissipation . Tray Types:

- Ladder Trays: Ideal for heavy cable loads and long spans; open rungs allow maximum ventilation and easy cable installation .
- Perforated/ Trough Trays: Provide continuous bottom support with ventilation openings; suitable where cable containment is important .
- Channel Trays: Compact, solid-bottom trays for small cable quantities or control wiring; fill up quickly and are best for light-duty applications .
- Wire Mesh/Basket Trays: Flexible and fast to install; preferred for data, telecom, and light power systems .

Material and Finish Options

Cable trays are available in pre-galvanized steel, hot-dipped galvanized steel, stainless steel (304L/316L), and powder-coated finishes. Material selection depends...
