

Cable tray positioning bracket

Article Overview

Cable tray placement brackets are support elements used to securely mount and space cable trays on walls, ceilings, or overhead structures, ensuring proper cable management and structural stability.

Types of Cable Tray Brackets

Stand-Off Brackets: These brackets mount cable trays with a specific clearance from walls or surfaces, typically ranging from 50mm to 300mm. They are ideal for spacing trays to allow airflow and easy cable access, and are often made from pre-galvanized or hot-dipped galvanized steel for durability and corrosion resistance .

G Hanger Support Brackets: Designed for overhead support, these brackets hold cable trays, trunking, or baskets from ceilings or beams. They are available in sizes such as 100mm and 150mm and are constructed from rigid steel for heavy-duty applications .

Trapeze Support Brackets: Pre-assembled for quick installation, trapeze brackets provide robust support for cable trays with various widths and drop lengths. They are suitable for long horizontal runs and can accommodate multiple trays on a single support structure .

Wall Brackets: Wall-mounted brackets attach cable trays directly to walls, providing a neat and secure routing solution. They are commonly used in commercial and industrial installations to maintain organized cable runs .

Installation Considerations

- **Mounting Surface:** Brackets can be fixed to walls, ceilings, floors, or steel structures. Ensure the surface can support the combined weight of the tray and cables

Article Content

Support methods

Attach the bracket to the mounting surface, position tray over bracket and slide tray under tabs. Lock tabs down using a screwdriver.

Cable Tray Accessories, Cable Tray Hangers & Support | RS
