

Can a 155m optical module transmit at 155m

Overview

A 155M SFP is an optical SFP module designed to transmit data at a fixed rate of 155Mbps, primarily used in SDH STM-1 and SONET OC-3 networks. 912 Mbit/s, including path overhead) using fiber optics. Depending on the system OC-3 is also known as STS-3 (electrical level) and STM-1 (SDH). Loss of signal (LOS) output is provided to indicate the loss of an input optical signal or receiver or the link status with partner. The system can also get the LOS (or Link)/D. The SFP-155M transceiver family are small form factor pluggable modules for bi-directional serial optical data communications such as SONET/SDH OC-3/STM-1 or Fast Ethernet. The modules are hot pluggable and digital diagnostic functions are available via an I2C serial bus specified in the SFP MSA. The RJ-155M-FX-DPLX runs on 100Mbps to 155Mbps duplex data links and has a 1310nm LED transmitter and a PIN receiver. It is RoHS compliant and lead free per Directive. This is a standard SFP optical module.
