

Concealed electrical distribution box obstruction

Article Overview

Electrical distribution boxes can be concealed for aesthetics, but must remain fully accessible and unobstructed according to safety codes.

Safety and Code Requirements

When concealing a distribution box, it is critical to maintain clear working space as mandated by the National Electrical Code (NEC). The required clearance includes:

- Depth: Minimum 36 inches in front of the panel.
- Width: At least 30 inches or the full width of the equipment, whichever is greater.
- Vertical clearance: Minimum 6 feet 6 inches from the floor to any overhead obstruction.
- Access: Any covering must be non-permanent and instantly removable without tools to allow emergency shut-off or technician service . Boxes must never be installed in a way that makes them inaccessible, such as behind permanent walls or structures, and underground boxes must be identifiable and accessible without excavation .

Practical Concealment Methods
