

Configuration of Public Network Access Switch

Overview

Basic setup can be straightforward, but verify the switch role, uplink, port speed and mode, VLANs, loops, PoE, addressing, management security, firmware, redundancy, and acceptance tests before connecting it to a live network. As your virtual training wheels, we've broken down the task into its simplest parts so you can successfully create client VLANs, build DHCP systems, and assign access ports without skinning your knees. Check the model number of your shiny new switch. Or, if you are using a spare, check the device. To block traffic from all networks, use the Set-AzStorageAccount command and set the -PublicNetworkAccess parameter to Disabled. Traffic will be allowed only through a private endpoint. We recommend that you use the Azure Az PowerShell module to interact. This workflow explains how to configure the basic settings on a switch. Whether the configuration deployment of a switch is completed all at once or done in phases, the basic switch settings must first be configured.
