

Cost of wiring in distribution box

Article Overview

The cost of wiring a distribution box typically ranges from \$1,200 to \$6,000 depending on panel size, amperage, complexity, and location.

Cost Overview

For a standard residential setup, rewiring or upgrading a distribution box can cost:

- 100-125A indoor panel: \$1,200-\$2,500 including labor and materials
 - 200A outdoor panel with new meter socket: \$3,000-\$6,000 depending on complexity and distance of wiring runs
- These costs include the panel, breakers, wiring, conduit, and permits. High-end installations with smart meters, main-tie breakers, or complex conduit routing can increase the price.

Factors Affecting Cost

- Panel Amperage and Size: Higher amperage panels (200A vs 100A) and more circuits increase material and labor costs .
- Wiring Complexity: Longer runs, multiple circuits, or rerouting through walls or ceilings add labor hours .
- Indoor vs Outdoor Installation: Outdoor panels require weatherproof enclosures and higher IP/NEMA ratings, which are more expensive .
- Material Quality: Copper wiring, high-grade breakers, and surge protection devices increase upfront costs but improve safety and longevity .
- Regional Labor Rates and Permits: Urban areas or regions with stricter codes may add 5-15% to the total cost, while rural areas may save on labor but incur transport fees for materials
