

Customized SFP Optical Module

Article Overview

SFP optical modules can be customized in terms of data rate, wavelength, connector type, diagnostic features, and firmware to meet specific network requirements while maintaining MSA compliance.

Overview of SFP Modules

SFP (Small Form-factor Pluggable) modules are hot-pluggable transceivers that convert electrical signals from switches, routers, or firewalls into optical signals for fiber or copper links, and vice versa . Modern variants include SFP (1–4 Gbps), SFP+ (up to 10 Gbps), and SFP28 (25 Gbps), supporting scalable connectivity in enterprise networks, data centers, and carrier-grade deployments . They adhere to Multi-Source Agreements (MSA), which standardize mechanical dimensions, pinouts, and electrical interfaces, ensuring physical interchangeability across vendors .

Customization Options

- Data Rate and Modulation
- Modules can be tailored for specific speeds such as 1G, 10G, 25G, or higher.
- Modulation formats like NRZ or PAM4 can be selected depending on link requirements .

- Wavelength and Fiber Type
- Single-mode (SMF) or multi-mode (MMF) fiber compatibility.
- Custom wavelengths (e.g., 850 nm, 1310 nm, 1550 nm) can be specified for network optimization
