

Customs Declaration 40G Optical Router

Article Overview

A 40G optical router or transceiver should be declared with accurate classification, reflecting its assembly origin, components, and function in high-speed data transmission.

Product Description and Function

A 40G optical router typically uses QSFP+ (Quad Small Form-Factor Pluggable) modules to provide 40 Gigabit Ethernet connectivity for data centers, enterprise networks, and service provider applications . These devices convert electrical signals to optical signals for long-distance, high-speed transmission and back at the receiving end. They are hot-swappable and compliant with IEEE 802.3ba standards, supporting multimode or single-mode fiber connections over distances ranging from 150 meters to 40 kilometers .

Components and Assembly

The optical transceiver consists of several key components:

- Main PCBA (Printed Circuit Board Assembly): Contains the majority of components, including digital signal processor chips for signal amplification, detection, and regeneration .
- Power PCBA: Provides power management for the device.
- Transmitter Optical Subassemblies (TOSA) and Receiver Optical Subassemblies (ROSA): Convert electrical signals to optical signals and vice versa.
- Additional elements include thermal pads, fiber routing blocks, and covers for hea...
