

Dimensions of Lighting System Distribution Box

Article Overview

Lighting distribution boxes come in various sizes and configurations, typically ranging from single-gang to multi-way boxes, with dimensions tailored to installation type, wire capacity, and protection requirements.

Standard Dimensions and Types

Single-gang boxes are commonly used for one switch or outlet, with typical dimensions around 2" x 3" x 3.5". Multi-gang boxes allow multiple switches or outlets in one location, with widths increasing proportionally while depth often ranges from 3.5" to 4.5" to accommodate higher wire fill and splicing needs. Junction boxes for lighting distribution often measure 4" x 4" or larger, with multiple depth options to ensure sufficient internal volume for wiring and future access.

Industrial and Outdoor Distribution Boxes

For industrial or outdoor lighting applications, distribution boxes are designed with higher capacity and protection. For example, boxes with IP66 rating can withstand wet conditions and are suitable for high mast lighting systems, floodlights, and sports lighting, with maximum carrying capacities up to 6000W. These boxes are typically closed vertical installations and may include features such as neutral and earth copper bars, guide rails, and mounting studs for secure installation.
