

Distribution box with protection level

Article Overview

Distribution boxes provide protection through internal circuit breakers or fuses and environmental resistance rated by IP codes, ensuring both electrical safety and durability against dust and water.

Electrical Protection

Distribution boxes are equipped with circuit breakers or fuses that continuously monitor electrical flow. When a fault occurs, such as a short circuit or overload, these devices automatically disconnect the affected circuit, preventing damage to appliances, reducing fire risks, and protecting users from electric shock (QJCMCB ; MyUSAWire). The main switch or main breaker controls the entire supply, allowing complete disconnection during emergencies or maintenance. Busbars distribute electricity reliably to individual circuits, while terminals ensure secure wiring connections.

Environmental Protection (IP Rating)

Distribution boxes also have an IP (Ingress Protection) rating, which indicates their resistance to dust and water. The rating consists of two digits: the first represents protection against solid particles, and the second represents protection against liquids. For example:

- IP20: Basic protection against fingers and large objects, suitable for indoor use (QJCMCB).
- IP54 or higher: Recommended for outdoor boxes, providing dust protection and re...
