

Fiber Optic Grating Velocity Measurement Method

Overview

Chirped fiber-optic Bragg grating (CFBG) sensors in combination with relatively inexpensive commercial-off-the-shelf electronic instruments can be used to monitor high speed events and make measurements of detonation wave velocities inside of energetic materials such as high. Chirped fiber-optic Bragg grating (CFBG) sensors in combination with relatively inexpensive commercial-off-the-shelf electronic instruments can be used to monitor high speed events and make measurements of detonation wave velocities inside of energetic materials such as high. Based on the principle of the Fiber Bragg Grating sensor, a sensor for monitoring the flow velocity and direction in real-time is designed in this paper. Meanwhile, the theoretical calculation formulas of flow velocity and direction are derived. Progress on an embedded velocity diagnostic using a 125 micron diameter. In this work, optical Fiber Bragg grating (FBG) sensors were used to measure water flow in pipes. Several types of coatings were incorporated into the design of the sensors to examine their effects on the elastic strain that the fiber underwent as a result of the water flow.

Article Content

A self-compensating Fiber Bragg Grating sensor system using fiber

This study proposed and experimentally validated a new methodology to resolve the cross-sensitivity problem of a Fiber Bragg Grating (FBG) based sensor system, enabling simultaneous

Design of Flow Velocity and Direction Monitoring Sensor Based on

Based on the principle of the Fiber Bragg Grating sensor, a sensor for monitoring the flow velocity and direction in real-time is designed in this paper. Meanwhile, the theoretical calculation formulas of flow

Fiber Bragg grating sensor for simultaneous measurement of flow rate ...

A new fiber-optic sensor system consisting of a fiber Bragg grating cantilever as a transducer is proposed and demonstrated to realize simultaneous measurement of fluid flow rate and

Method for simultaneous measurement of velocity and direction of fluid ...

This paper proposes the interferometric method for arrays inscription of type I Bragg gratings on the unified segment of the standard telecommunication single-mode optical fiber, using

Fiber Optic Sensor

This paper reviews the fiber optic sensors that have been developed and applied to measure cable forces, including fiber Bragg grating, interferometer, and fully distributed sensors. The reviewed

Soft 2D tactile sensor based on fiber Bragg gratings and machine ...

Fiber-optic sensors such as fiber Bragg gratings (FBGs) represent a highly appealing alternative to electrical sensors for creation of tactile sensors, as they are free from the primary

Measurement of Water Velocity in Gas-Water Two-Phase Flow with

A method to measure the superficial velocity of the water phase in gas-water flow using an electromagnetic flowmeter (EMF) and rotating electric field conductance sensors (REFCSs) is

Optical fiber sensor for water velocity measurement in rivers and ...

In this work, optical fiber Bragg grating sensors were used to measure water velocity and examine how it was distributed in open channels.

High-sensitivity water leakage detection and localization in tunnels ...

The quasi-distributed measurement is achieved by the fiber Bragg gratings (FBG) along the optical fiber, but its monitoring distance and spatial resolution are restricted by limited numbers of

Liquid flow motion rate measuring method, based on the fiber Bragg gratings

Abstract The paper presents the study of the possibilities of optical monitoring of the fluid flow velocity. An optical fiber with an array of Bragg fiber gratings, the central wavelengths of which varied

Turning Fiber into a Sensing System: The Magic of

Fiber sensing technology emerged in the 1970s. In 1976, the first fiber optic gyroscope (FOG) for angular velocity measurement, exploiting the Sagnac

Liquid flow motion rate measuring method, based on the

An optical fiber with an array of Bragg fiber gratings, the central wavelengths of which varied depending on the velocity of the transmitted stream,

Fiber-Optical-Sensor-Based Technologies for Future Smart-Road

Focus is also given to fiber-optic-sensor-based solutions for smart road applications, encompassing both well-established techniques such as Fiber Bragg Grating (FBG) sensors and distributed sensing

Deformation reconstruction of pipes under impact load using inverse ...

Fiber optic sensors have also significantly advanced strain-based indirect reconstruction methods. Although fiber optic sensor technology can provide high-resolution strain data, reconstructing the

Detonation Velocity Measurement with Chirped Fiber

Abstract Detonation velocity is an important parameter for explosive, and it is crucial for many fields such as dynamic chemistry burn models, detonation propagation

Liquid flow motion rate measuring method, based on the

The paper presents the study of the possibilities of optical monitoring of the fluid flow velocity. An optical fiber with an array of Bragg fiber gratings, the

Design of optical fiber Bragg grating-based sensors for flow ...

In this work, optical Fiber Bragg grating (FBG) sensors were used to measure water flow in pipes. Several types of coatings were incorporated into the design of the sensors to examine their effects

In-Flight Identification of Helicopter Rotor Blade Aerodynamic Loads ...

The study presents a non-invasive aerodynamic load identification method for measuring helicopter rotor blade loads using flapping angle (via optical tracking) and flapping moment (via Fiber

Method for simultaneous measurement of velocity and direction of fluid ...

This article presents a fiber-optic method for measuring the velocity of a liquid flow, taking into account the flow direction. The proposed method is based on the use of an optical fiber with an

Fiber Bragg Grating low-frequency accelerometer based on spring ...

Vibration measurement technology plays a pivotal role in national defense construction as well as in national production, and accelerometers made with optical fibers as sensing elements

Fiber-optic sensor

A fiber-optic AC/DC voltage sensor in the middle and high voltage range (100–2000 V) can be created by inducing measurable amounts of Kerr nonlinearity in single-mode optical fiber by exposing a

Method for simultaneous measurement of velocity and direction of fluid ...

This work is devoted to the development and research of a new optical method for measuring the velocity of a fluid flow and determining the orthogonal directions of such a flow.

Embedded fiber-optic Bragg grating (FBG) detonation velocity sensor

This embedded fiber approach has the unique potential to continuously monitor the detonation velocity inside new explosive compounds as well as to track the changes in detonation velocity as the
