

Fiber optic cold connector RSC

Article Overview

The RSC (Ruggedized Singleway Connector) is a high-performance fiber optic cold connector designed for field-installable, mechanical splice applications in harsh environments.

Overview

The RSC connector is a ruggedized fiber optic connector manufactured from Arcap for corrosion resistance, featuring environmental sealing and an anti-vibration coupling mechanism . It is designed for both singlemode and multimode fibers, supporting various fiber sizes (8/125, 50/125, 62.5/125, 100/140, 200/280 μm) and simplex cable diameters (1.6–5 mm), . The connector uses a sprung-loaded optical contact in both plug and receptacle to maintain physical contact even under severe shock or vibration .

Cold Connector / Mechanical Splice Functionality

As a cold connector (also called a mechanical splice or fast connector), the RSC allows field termination without fusion splicing. It aligns the bare fiber with a pre-installed fiber stub inside the connector body using mechanical clamping or index-matching gel, enabling immediate optical signal transmission . This makes it ideal for FTTH deployments, emergency repairs, and small-scale installations where rapid termination is required .
