

Fire pump distribution box model and specifications

Article Overview

Fire pump distribution boxes are integral components of packaged fire pump houses, designed to manage electrical supply and control for fire pumps and auxiliary systems, typically built to NFPA 20 standards.

Overview

A fire pump distribution box is a dedicated electrical panel that controls and distributes power to fire pumps, jockey pumps, heaters, fans, alarms, and other auxiliary equipment within a fire pump house. These boxes are usually pre-wired and factory-tested as part of packaged pump houses, ensuring compliance with NFPA 20 and other fire safety standards .

Typical Models and Configurations

- Packaged Pump House Distribution Boards
- Designed for external or containerized pump houses.
- Include mains distribution board for electrical services excluding the main fire pumps.
- Provide free spurs for tank heaters and trace heating systems .
- Can be integrated with jockey pumps, motorized louvres, fan extraction, and audible alarms.

- Containerized Fire Pump Units
- Complete fire pump set assembly inside a containerized enclosure....
