

GJXH type 4-core optical fiber cable

Article Overview

GJXH type 4-core optical fiber cable is a versatile fiber optic solution designed for both indoor and outdoor applications, featuring four single-mode fiber cores with robust mechanical protection.

Overview

The GJXH 4-core fiber optic cable is widely used for Fiber-to-the-Home (FTTH), Fiber-to-the-Building (FTTB), and industrial network installations. It consists of four single-mode fiber cores enclosed in a protective jacket that ensures durability against environmental factors such as moisture, UV radiation, and temperature variations . The cable is suitable for both indoor and outdoor deployment, depending on the variant chosen.

Construction and Features

- **Fiber Cores:** Contains 4 single-mode fibers for high-speed data transmission .
- **Reinforcement:** Some variants, like the GJXH-4B6, feature metal-reinforced jackets for enhanced tensile strength, rodent resistance, and mechanical durability, making them ideal for metal entry and aerial applications .
- **Sheath Material:** The outer jacket can be UV-resistant white for outdoor use or LSZH/PVC for indoor safety and flame retardance .
- **Central Strength Member:** Typically includes fiber-reinforced plastic (FRP) or steel wire to provide structural support and prevent fiber damage during installation .
- **Loose Tube Design:** The fibers are often housed in a loose tube or bow-type configuration, which protects them from bending stress and simplifies splicing
