

Geometric Dimensions of Wall-Mounted Distribution Box

Article Overview

Wall-mounted distribution boxes typically range from 200×200×120 mm up to 800×600×300 mm, with larger industrial units reaching 1200×1200×400 mm.

Typical Size Ranges

Wall-mounted distribution boxes, also known as electrical enclosures or consumer control units, come in a variety of sizes depending on application and manufacturer. For standard residential or light commercial use, common dimensions range from 200×200×120 mm to 800×600×300 mm (height × width × depth) to accommodate wiring, circuit breakers, and internal components . Larger industrial or main distribution boards may reach 1200×1200×400 mm for more complex electrical systems .

Depth and Internal Volume Considerations

Depth is a critical factor for wall-mounted boxes, as it affects wire fill capacity, splicing space, and ease of installation. While external dimensions are often listed in catalogs, the usable internal space is reduced by wall thickness, mounting hardware, and door returns . Choosing a deeper box ensures sufficient room for multiple wires, bus bars, and future expansion .
