

High-Quality Fireproof Cable Trays

Article Overview

Top fireproof cable trays include Flamro, Meka Pro, Durasteel, and Cablofil, all tested for high fire resistance and reliability in critical installations.

Recommended Fireproof Cable Tray Options

1. Flamro Solutions Flamro offers fire protection coatings and tapes such as FLAMMOTECT-A and DG-CR 0.7, which form a protective shield around cables and trays. These solutions are suitable for high-rise buildings, industrial plants, hospitals, airports, and nuclear facilities. They provide resistance to fire, UV radiation, salt water, oil, and chemicals, ensuring cables remain functional during emergencies . 2. Meka Pro Fire-Resistant Systems Meka Pro provides over 1,200 fire-tested cable management products. Their systems are tested according to EN 1363-1, ensuring that electrical circuits remain operational during fire events (E60/E90 ratings). Meka Pro emphasizes the use of materials that do not emit toxic gases and ensures structural integrity under load, making them suitable for industrial and commercial installations . 3. Durasteel Cable Encasements Durasteel offers cable enclosures assessed under BS EN 1366-5:2003, providing up to EI120 fire rating (240 minutes integrity, 120 minutes insulation). These enclosures are designed for critical life-safety cables and have a 40-year design life. They are suitable for both indoor and outdoor applications and are widely used in infrastructure and industrial projects . 4. Cablofil Fire-Resistant Cable Trays Cablofil cable trays are fire-resistant and fireproof, tested under the DIN 4102-12 standard. They are suitable for low and high voltage cables in construction, power, oil, gas, petrochemical, rail, and utilities industries. The trays are tested at temperatures up to 1000°C for durations of 30, 60, and 90 minutes, ensuring compliance with stringent fire safety requirements
