Article Overview

A standard 2-meter (2000 mm) server rack can accommodate approximately 45 rack units (U).

Understanding Rack Units

Calculating Units in a 2-Meter Rack

To determine the number of rack units in a 2-meter rack:

- Divide the total height by the height of one rack unit: $2000\text{ mm} \div 44.45\text{ mm/U} \approx 45\text{ U}$. This means a 2-meter rack can hold about 45 standard rack units, allowing for a mix of 1U, 2U, or larger devices .

Common Rack Sizes

While 42U racks are the most widely recognized standard in data centers, 45U and 48U racks are also common for maximizing vertical space . The width of standard racks is typically 19 inches, and depth varies depending on equipment and airflow r...
