

How much does a factory electrical distribution box cost

Article Overview

Industrial electrical distribution boxes for factories typically range from \$200 to over \$2,000, depending on capacity, material, and installation complexity.

Cost Overview

The price of a factory-grade electrical distribution box varies widely based on specifications and usage. Basic industrial boxes start around \$200, while high-capacity or specialized units can exceed \$2,000 due to enhanced durability, higher voltage and amperage ratings, and advanced internal components like circuit breakers, surge protectors, and busbars . Installation costs for industrial setups can be substantial, often involving weeks of labor and permit fees, especially for retrofitting or complex factory systems . Smart distribution boxes with monitoring and load management features may double the upfront cost but offer long-term energy savings .

Factors Affecting Cost

- **Material and Construction:** Metal enclosures (steel or aluminum) are preferred for factories due to durability and fire resistance, while plastic units are cheaper but less robust . Weatherproof or outdoor-rated boxes carry premium pricing.
- **Voltage and Amperage Capacity:** Higher voltage and multi-circuit configurations increase cost. Industrial boxes often handle three-phase power for heavy machinery .
- **Internal Components:** The inclusion of high-quality breakers, surge protection, and busbars significantly affects pricing
