

How to configure a 4-circuit distribution box

Article Overview

A 4-circuit distribution box typically includes a main switch, four MCBs or RCBOs, a neutral bar, an earth bar, and optional surge protection, arranged to safely distribute power to four outgoing circuits.

Key Components

- **Main Switch/Isolator:** Controls the incoming supply and allows complete isolation of the distribution box for maintenance or emergency purposes .
- **Circuit Breakers (MCBs/RCBOs):** Each of the four outgoing circuits is protected by an individual Miniature Circuit Breaker (MCB) or Residual Current Breaker with Overcurrent protection (RCBO) to prevent overloads and short circuits .
- **Neutral Bar:** Collects all neutral wires from the outgoing circuits and connects them to the incoming neutral line .
- **Earth Bar:** Provides a common grounding point for all protective earth (PE) wires, ensuring safety against electric shock .
- **Surge Protective Device (SPD):** Optional but recommended if the installation is prone to voltage spikes; it is connected on the supply side to protect sensitive equipment .

Internal Layout

- The incoming live (L), neutral (N), and protective earth (PE) wires enter the box and connect to the main switch and busbars .
- The phase busbar distributes the live supply to each of the four MCBs or RCBOs....
