

How to cover a household electrical distribution box

Article Overview

You can safely cover your household electrical distribution box using decorative or functional covers while maintaining required clearance for access and safety.

Safety First

Before covering your electrical panel, it is crucial to follow National Electric Code (NEC) requirements. The panel must have a clear working space of at least 30 inches wide and 36 inches deep, extending vertically to 6.5 feet from the floor. This ensures safe access for maintenance and prevents hazards like arc flashes. No permanent structures, shelving, or storage units may encroach on this space .

Cover Options

1. Decorative Covers

- Flip-up or hinged covers: These allow easy access while concealing the panel. Materials like PVC or high-grade ABS are fire-resistant, waterproof, and durable .
- Minimalist or wood-look covers: Sleek designs in neutral colors can blend with your interior, providing a polished look without compromising safety .
- Custom DIY covers: You can disguise the panel with a painting, framed art, or a small cabinet that does not block the required clearance .

2. Functional Covers...
