

How to install a cable tray sunshade cover

Article Overview

Installing a cable tray sunshade cover involves securing the cover to a properly supported cable tray system while ensuring alignment, ventilation, and load safety.

Preparation and Planning

Before installation, plan the tray route and determine where the sunshade cover will be mounted. Ensure the cable tray is already installed, level, and supported according to recommended spacing (typically 1.5 to 3 meters depending on tray type and load) to prevent sagging or stress on the cover. Measure the tray width and length to select a sunshade cover that fits properly.

Tools and Materials Needed

- Sunshade cover panels compatible with your tray type
- Mounting brackets or clips (often supplied with the cover)
- Hex nuts, washers, and threaded rods for support if needed
- Drill or screwdriver for fastening
- Level and measuring tape for alignment
- Safety gear (gloves, goggles, helmet)

Installation Steps

- Position the Sunshade Cover: Place the cover over the cable tray, ensuring it aligns with the tray edges and does not interfere with cable access or airflow
