

Huawei Switch Access Situational Awareness

Article Overview

Huawei Switch Access Situational Awareness provides real-time monitoring, threat detection, and security visualization for network switches, enabling proactive risk management and automated response.

Overview

Huawei's situational awareness solutions for network switches integrate real-time monitoring, security posture visualization, and automated threat response. These tools allow network administrators to gain a comprehensive view of switch access, detect anomalies, and respond to potential security incidents efficiently .

Key Features

1. Real-Time Security Monitoring Huawei situational awareness platforms, such as SecMaster and HiSec Insight, continuously monitor network traffic and switch access events. They detect deviations from baseline configurations, unauthorized access attempts, and potential vulnerabilities, providing alerts on large screens or dashboards for immediate visibility . 2. Threat Detection and Analysis

- HiSec Insight uses AI-powered detection and big data analytics to identify threats across the network, including Advanced Persistent Threats (APT).
- Attack chains are traced, and threat profiling is performed to understand the source and impact of incidents
