

Ireland Airport Air Traffic Control Fiber Optic KVM Project

Overview

The new ATC tower comprises a fully-redundant KVM matrix switching solution for fail-safe operation in critical situations. The KVM system instantly connects operators in the visual control room at the top of the tower to computers over 100 meters beneath without loss of. AirNav Ireland is a commercial semi-state company employing approximately 600 staff at six locations around Ireland. We provide air traffic management and related services including aeronautical communications and technical services within the 451,000km² of airspace controlled by Ireland. with high-speed data transmission and full computer access. Airport operators and flight. Fibre optic airport installations form the backbone of modern airport network systems and ensure uninterrupted data transmission for critical aviation applications – from air traffic control to baggage handling. The highly available fibre optic infrastructure connects over 500 different systems at.
