

Is it normal to test fiber optic patch cords with a red light pen

Article Overview

Use a Visual Fault Locator (VFL) or red light pen to check fiber optic patch cords for continuity, breaks, bends, and connector faults by observing the visible red light along the fiber.

What You Need

- A fiber optic red light pen (VFL) with the appropriate connector adapter for your patch cord (e.g., SC, ST, FC, or LC with optional adapters)
- The fiber optic patch cord to be tested
- Optional: protective eyewear and a clean workspace to avoid contamination

Step-by-Step Testing Procedure

- Prepare the Patch Cord
 - Ensure both ends of the patch cord are clean and free of dust or debris.
 - Remove any protective caps from the connectors.
- Connect the Red Light Pen
 - Attach the VFL to one end of the patch cord using the correct adapter.
 - Make sure the connection is secure to allow the red laser light to enter the fiber core.
- Select the Operating Mode
 - Constant light mode: Provides a steady red light to verify continuity along the fiber...
