

Is there no SC port 10 Gigabit optical module

Overview

Due to power demands, there are currently no pluggable 10GBase-T or NBase-T SFP modules; all of the current products on the market are fixed interfaces only. 10GBase-SR is the original multimode optics specification and is still by far the most commonly used. The Cisco ® 10GBASE SFP+ modules (Figure 1) give you a wide variety of 10 Gigabit Ethernet connectivity options for data center, enterprise wiring closet, and service provider transport applications. At that time, the characteristics are convenient for maintenance and update, fault. Small Form-factor Pluggable (SFP) is a compact, hot-pluggable network interface module format used for both telecommunication and data communications applications. An SFP interface on networking hardware is a modular slot for a media-specific transceiver, such as for a fiber-optic cable or a copper. This equipment offers both symmetric Downstream and Upstream speeds of 10Gbps, as well as the option of asymmetric speeds of 10Gbps for Downstream and 2. Its robust construction, including the SC/UPC connector combined with the use of Single Mode fiber, and BiDi technology.
