

Latest News on Optical Cable Splicing in Norway

Overview

Nexans Norway AS announced in March 2026 the successful completion of critical infrastructure projects, such as providing a 225 kV export cable system for Dieppe-Le Treport offshore wind farm and expanding the Arctic Way fiber-optic network. These events underscore Nexans' central role in Norway's offshore. An undersea fiber-optic cable between mainland Norway and the archipelago of Svalbard in the Arctic Ocean has been lost in a mysterious event. The cable, which will be produced at Nexans' plant in Rognan, is designed to provide a secure and reliable subsea fibre connection. Nexans i Norge rapporterte en omsetning på 15,4 milliarder kroner i 2024 – en økning på 44 prosent fra året før. We at Norsk Fiberoptikk help customers find the most suitable cable for the right area of use.
