

Materials of distribution boxes and cabinets

Article Overview

Distribution boxes and cabinets are commonly made from metals like steel and aluminum, or plastics such as PVC, polycarbonate, HDPE, and thermoset plastics, each chosen based on strength, corrosion resistance, and environmental suitability.

Common Materials

1. Metals

- **Steel:** Cold-rolled or galvanized steel is widely used for industrial and outdoor applications due to its high mechanical strength, impact resistance, and fire containment capabilities. Steel enclosures can withstand internal arcing and prevent fire spread, but they are prone to rust in corrosive or coastal environments unless properly coated .
- **Aluminum:** Lightweight, corrosion-resistant, and suitable for residential or commercial use. Aluminum is easier to handle than steel and does not rust, making it ideal for moderate outdoor exposure .
- **Stainless Steel:** Highly resistant to corrosion and chemical exposure, often used in pharmaceutical, food processing, or coastal environments where durability against moisture and chemicals is critical .
- 2. **Plastics**
- **PVC (Polyvinyl Chloride):** Lightweight, corrosion-resistant, and cost-effective. Suitable for indoor or low-voltage applications. PVC is easy to install and does not rust .
- **Polycarbonate:** Strong, flame-retardant, and impact-resistant. Polycarbonate encl...
