

Names of Distribution Box Covers

Article Overview

Distribution box covers are typically classified by material, design, and application, including plastic covers, metal covers, flush-mounted covers, surface-mounted covers, and transparent or hinged covers.

Common Types of Distribution Box Covers

- **Plastic Covers** Made from durable thermoplastics such as polycarbonate (PC) or acrylonitrile styrene acrylate (ASA), these covers are lightweight, corrosion-resistant, and commonly used in residential or light commercial applications .
- **Metal Covers** Constructed from stainless steel or epoxy-coated metal, these covers provide higher mechanical strength and impact resistance, suitable for industrial or outdoor environments .
- **Flush-Mounted Covers** Designed to be installed inside walls, flush-mounted covers offer a neat, concealed appearance while providing access to the distribution box for maintenance .
- **Surface-Mounted Covers** These covers are mounted on the wall surface, making them easier to access and ideal for areas where wall embedding is not feasible .
- **Hinged or Transparent Covers** Some covers feature a hinged design or transparent window, allowing users to view circuit breakers or meters without opening the box, enhancing safety and convenience .
- **Enclosed Switchgear Covers** Used in medium- to high-voltage applications, these covers are part of enclosed switchgear panels, providing protection for switches, breakers, and control devices .
- **Consumer Unit Covers** Found in residential settings, these covers protect circuit breakers, fuses, and RCDs while allowing easy access for operation and maintenance .
