

# One circle of optical cable reel

## Article Overview

A single circle of an optical cable reel represents one full loop of fiber optic cable wound around the reel, designed to protect the cable and maintain its minimum bend radius during storage and deployment.

### Overview

An optical cable reel is a specialized device used to store, transport, and deploy fiber optic cables efficiently while preventing damage, tangling, or excessive bending that could compromise signal integrity . Each loop or circle of cable on the reel ensures that the fiber maintains its minimum bend radius, which is critical to avoid signal loss or permanent fiber damage .

### Types of Optical Cable Reels

- Indoor compact reels: Small, precision-engineered reels for short-length or small-diameter fiber cables, often used in data centers or repair operations .
- Field deployment reels: Larger reels mounted on carts or tripods for outdoor installations, allowing controlled pay-out of cable during aerial, underground, or temporary setups .
- Modular reels (e.g., MARS®): Lightweight, modular systems designed for harsh environments, offering stackable, transportable, and versatile deployment options .

### Key Features

- Mechanical protection: Each circle of cable is supported by the reel structure to pr...
