

PLC Battery Distribution Box

Article Overview

A PLC Battery Distribution Box is a centralized unit that safely distributes DC power from batteries to programmable logic controllers (PLCs) and connected devices, ensuring reliable operation and protection.

Overview

A PLC Battery Distribution Box serves as a hub for distributing power from one or more batteries to multiple PLCs or industrial control devices. It ensures stable voltage supply, overload protection, and organized wiring, which is critical in automation, industrial, and hazardous environments . These boxes can be passive or active, depending on whether they include fuses, circuit breakers, or monitoring electronics.

Key Features

- **Multiple Output Channels:** Many models provide several output terminals (e.g., 8-way M12 I/O) to connect multiple devices simultaneously .
- **Maintenance-Free Batteries:** Some battery boxes, like the R. STAHL Series 8316, use sealed batteries with minimal self-discharge and protection against total discharge, offering long service life and low maintenance .
- **Safety in Hazardous Areas:** Certain battery boxes are designed for explosive or hazardous environments, with closed systems that recombine gases during charging to prevent hazards .
- **Monitoring and Protection:** Advanced units may include fuses, circuit breakers, or monitoring systems to protect connected PLCs and ensure reliable operation
