

Price of 48-core wall-mounted patch panel for emergency communication in Haiti

Article Overview

The price of a 48-core wall-mounted patch panel typically ranges from \$150 to \$500 USD, depending on type, materials, and features.

Overview

A 48-core wall-mounted patch panel (also called an Optical Distribution Frame or ODF) is essential for managing fiber optic connections in emergency communication networks. These panels allow for efficient termination, splicing, and distribution of optical fibers while being compact enough for wall mounting, which is ideal for space-constrained environments .

Price Range

- Standard fixed 48-core ODFs: These non-modular units with built-in cable ports and splice trays generally cost \$150-\$250 USD for indoor use .
- Sliding or modular 48-core ODFs: Designed for easier maintenance and future expansion, these units typically range from \$300-\$500 USD, depending on materials, front-access trays, and environmental protection features .
- Wall-mount Cat5e/Cat6 patch panels: For Ethernet-based emergency networks, 48-port wall-mounted panels are available for \$100-\$200 USD on platforms like Amazon or CableWholesale
