

Price of Mesh Cable Tray Bends

Article Overview

The installation of mesh cable trays at bends typically costs between \$15 to \$50 per bend, depending on material, size, and labor complexity.

Cost Factors

Material Type: Mesh cable trays are usually made of pre-galvanized steel, hot-dip galvanized steel, aluminum, or stainless steel. Pre-galvanized steel is the most affordable, while stainless steel is the most expensive. The choice of material affects both the tray cost and the fittings required for bends.

Labor and Complexity: Installing a bend is more labor-intensive than straight sections because it requires precise alignment, cutting, and securing of the tray. Labor costs can vary depending on the installer's experience and the site conditions. Bends may require additional brackets or supports, which add to the total cost.

Tray Size and Load: Larger trays carrying heavier cables require stronger supports and more secure fittings at bends, increasing installation costs. For small data or network cables, costs are lower compared to industrial power cable installations.

Installation Environment: Indoor office or data center installations are generally less expensive than outdoor or industrial environments, where corrosion protection and safety measures may increase costs.

Estimated Pricing

- Pre-galvanized steel mesh tray bend: \$15-\$25 per bend
- Hot-dip galvanized steel bend: \$20-\$35 per bend
- Aluminum bend: \$25-\$40 per bend...
