

# Requirements for Pre-embedded Cable Trays in Low-Voltage Rooms

## Overview

Cable Types: Only use conductors rated for open-air environments, such as Tray Rated (Type TC) or Metal-Clad (Type MC) cables. Clearances: Maintain at least 12 inches of vertical clearance above trays for installation and maintenance access (2026 NEC update). The use and installation of cable trays is covered by legally enforceable OSHA regulations in 29 CFR 1910. The mechanical and electrical characteristics, tests, in this document have been tested extensively by competent professional engineers completely installed, without damage either to conductors or structural system use maintain spacing or to keep cables in place when the tray is erected the minimum bend radius for cables as they exit the bottom of the cable tray.
