

Single-mode external fiber optic transceiver

Overview

A single mode SFP transceiver is an optical module that uses laser-based transmission over single mode fiber to deliver long-distance, high-speed data communication, typically at 1310nm or 1550nm wavelengths. Singlemode Fiber Optic Transmitters, Receivers, Transceivers are available at Mouser Electronics. Improve safety, signal integrity, and reliability by using two optical fibers instead of wire to transfer bidirectional serial data using single-mode optical fiber. Apply for instrumentation, protection, automation and other applications that benefit from economical fiber-optic links up to 23. SFP (Small Form-factor Pluggable) transceivers are essential components in modern fiber optic networks, enabling network devices such as switches, routers, and servers to transmit and receive data over optical fiber. Whether for use in data centres, telecommunications networks, such as FTTH installations or corporate networks, our modules offer. In today's data-driven world, optical transceivers play a crucial role in high-speed data transfer over fiber optic networks.
