

Slovakian Household Electrical Distribution Box Specifications

Article Overview

Slovakian household distribution boxes are designed for 230 V, 50 Hz systems, accommodating Type E plugs, with dimensions and components tailored to the number of circuits and wire sizes.

General Specifications

Household distribution boxes in Slovakia serve as the central hub for managing electrical circuits safely and efficiently. They are designed to handle the standard 230 V, 50 Hz mains supply and are compatible with Type E grounded sockets. Type C plugs can be used with these sockets, but only Type E outlets are permitted for new installations due to grounding requirements.

Dimensions and Layout

- Small load or lighting circuits: For incoming wires less than 10 mm² and fewer than 20 circuit switches, the box width is calculated by summing the widths of the switches plus 20 mm on each side, the height is the switch height plus 40 mm, and the depth is the maximum switch depth plus 10 mm.
- Larger installations: If the number of switches exceeds 20, the box should accommodate two rows of switches, with width calculated as the sum of switch widths plus 40 mm, height remaining 40 mm above switch height, and depth as maximum switch depth plus 10 mm
