

Somali Tray Cable Tray Specifications

Article Overview

Cable trays in Somalia are available in ladder, perforated, and solid-bottom types, fabricated from mild steel, stainless steel, or aluminum, with standard dimensions and international compliance for electrical installations.

Types of Cable Trays

1. Ladder Type: Constructed with two longitudinal side rails connected by transverse rungs, providing maximum ventilation for heat-producing cables such as power cables. Rungs can be welded or bolted depending on the material (GI or steel) and are ideal for long cable runs where heat dissipation is critical . 2. Perforated/Slotted Type: Made from a single sheet of metal with perforations, offering moderate protection while allowing ventilation. Suitable for control, communication, and instrumentation cables . 3. Solid-Bottom Type: Fabricated from a single sheet of metal, providing excellent protection from external damage. Primarily used for non-heat-producing cables .

Materials and Finishes

- Mild Steel: Hot-dip galvanized per IS 2062, EN 10025, ASTM A123/ISO 1461, with 80-micron coating for corrosion resistance .
- Stainless Steel: BSEN 10088-2, grades 304/316 for high durability .
- Aluminum Alloy: BSEN 485-1, grades AA1100, AA8011, A3105, lightweight and corrosion-resistant .
- Electro Powder Coating: Optional for additional corrosion protection
