

Southeast Asia Communication Cable Management Rack Specifications

Article Overview

Communication cable management racks in Southeast Asia typically feature 19-inch standard widths, 42–45U heights, robust steel or aluminum construction, and integrated vertical and horizontal cable management options.

Rack Dimensions and Capacity

Standard racks are 19 inches wide with heights ranging from 42U to 45U (1U = 1.75 inches), suitable for telecom and IT equipment. Depths vary depending on cable volume and equipment type, with options for extended depth racks to accommodate high-density cabling. Side rail channels are often 76mm x 152mm (3 in. x 6 in.) for routing backbone or horizontal cables. Racks are designed to support dynamic loads up to 800 N during installation.

Materials and Finish

Racks are typically constructed from powder-coated steel or aluminum, with a RAL 7038 (Agate grey) finish for corrosion resistance. Top plates may include ventilation grills, and doors can be perforated steel, solid steel, tempered glass, or acrylic to optimize airflow and security. Aluminum racks are generally recommended for cable management only, while steel racks are preferred for mounting active equipment.
