

Supply of raw materials for distribution boxes

Article Overview

Distribution boxes require high-quality metals and durable plastics, sourced globally to meet safety, durability, and environmental standards.

Key Raw Materials

Distribution boxes are typically made from a combination of metals and plastics, each chosen for specific performance characteristics:

- **Metals:** Steel, stainless steel, and aluminum are commonly used for their impact resistance, durability, and corrosion resistance. Galvanized steel or stainless steel is preferred for outdoor or industrial applications to prevent rust and withstand harsh environments .
- **Plastics:** Polycarbonate, PVC, high-density polyethylene (HDPE), and thermoset plastics like SMC are used for lightweight, flame-retardant, and corrosion-resistant enclosures . Polycarbonate and fiberglass-reinforced plastics are particularly valued for their heat tolerance and self-extinguishing properties, making them suitable for high-power or fire-sensitive applications .

Material Requirements

Raw materials must meet several critical requirements to ensure the safety and longevity of distribution boxes:...
