

Surface-mounted cover distribution box

Article Overview

Surface-mounted distribution box covers protect internal components, provide visibility or security, and are available in various materials and protection classes for indoor and outdoor use.

Overview

A surface-mounted cover is the external door or lid of a distribution box that is installed on the surface of a wall rather than recessed. These covers serve multiple purposes: they protect electrical components from dust, moisture, and mechanical impact, allow visual inspection of fuses or indicators, and can be locked for safety .

Materials and Design

Surface-mounted covers are commonly made from polycarbonate (PC) or acrylonitrile butadiene styrene (ABS), which are durable, flame-resistant, and halogen-free . They can be transparent, allowing quick visual checks of internal components, or opaque for aesthetic or security reasons. Some covers feature hinges on both sides and can be equipped with safety locks .

Protection Classes

Covers are rated according to IP protection standards:

- IP30/IP40: Suitable for dry indoor environments such as storage rooms or offices .
- IP54/IP65: Designed for damp or wet areas, including bathrooms, cellars, garages,...
