

Syrian Integrated Power Source

Overview

This project marks one of the largest strategic energy initiatives in Syria since 2011 and is part of the Ministry's broader plan to rehabilitate the national electricity grid, improve operational efficiency, and ensure the sustainable stability of the power supply. Syria's power sector sits at the core of the country's economic stabilisation and reconstruction agenda. Recently the country has attracted renewed interest from regional and international stakeholders, supported by partial sanctions relief from the US, UK and EU principally as a result of the. The EU can be part of the solution with a strong offer supporting domestic electricity generation and long-term energy system integration. Syria's energy system is in ruins. The new government has the unenviable task of reconstructing ruined infrastructure, while combatting unemployment and poverty - and promoting scientific and technological development across Syrian society. Despite these. Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored.
