

The power distribution box has no response when pressed

Overview

Check the electrical load and ensure that the sensors do not exceed the 10 Amp maximum. ccasionally I can hear a relay click on and a pump or motor try to start. 3v, and the IBS seems to be intact. DIY Doable?

☐☐ Do not drive — No. The vehicle is unreliable and can lose all electrical power at any time, including while driving. The vehicle battery may only be disconnected when the Check Control message indicates that the additional electrical storage in the instrument cluster (KOMBI) has been completely switched off. The de-energised state cannot be determined by means of the Check Control message "48V vehicle electrical. The immediate reaction often involves a series of increasingly desperate button presses, followed by a frantic jiggling of cables, as if a loose connection might magically breathe life back into the inert machine. This article aims to transform that panic into a methodical approach, guiding you. Here are some solutions when a power distribution box fails: Safety First: Make sure you are safe. Do not touch live parts, turn off the corresponding power switch to avoid the risk of electric shock.
