

The third-level distribution box has a portable socket

Article Overview

A third-level distribution box with a portable socket is a compact, mobile unit that safely distributes power to multiple devices in locations without fixed wiring.

Overview

A third-level distribution box equipped with a portable socket functions as a self-contained power distribution unit, allowing multiple devices to be powered from a single industrial inlet. These boxes are designed for temporary or flexible power needs, making them ideal for construction sites, workshops, events, and outdoor maintenance operations ().

Construction and Features

- **Enclosure Material:** Typically made from polyethylene (PE) or flame-retardant polycarbonate (PC), providing corrosion resistance, electrical insulation, and impact resistance ().
- **Protection Rating:** Many units have IP44 to IP67 ratings, ensuring protection against dust, water, and environmental hazards ().
- **Safety Components:** Integrated circuit breakers (MCBs), Residual Current Devices (RCDs), and sometimes voltage/current indicators enhance safety and prevent overload or electric shock ().
- **Mobility:** Compact and lightweight design allows easy transport and deployment wherever temporary power is needed ()....
