

UPC cold joints and SPC

Article Overview

The Unified Patent Court (UPC) will have jurisdiction over SPCs linked to European patents, potentially streamlining enforcement and affecting future Unitary SPCs.

UPC Jurisdiction over SPCs

The UPC has exclusive jurisdiction over classical European patents, European patents with unitary effect (Unitary Patents), and SPCs issued for products covered by such patents. This means that once the UPC is operational, it can handle infringement and validity actions for SPCs, provided the underlying patent falls within its jurisdiction. National courts remain competent only for matters outside the UPC's exclusive scope, and during the transitional period of seven years, actions concerning classical European patents may still be brought before national courts or authorities, with a possible extension of another seven years (Article 83(1) UPCA) .

Impact on SPC Practice

The introduction of the UPC and Unitary Patents (UPs) will change how SPCs are enforced and challenged. Currently, SPCs must be applied for on a country-by-country basis, which is costly and administratively burdensome. The UPC could provide a centralized forum for disputes, potentially reducing fragmentation and legal uncertainty. However, the unitary effect of a Unitary Patent does not automatically extend to SPCs, meaning that a Unitary SPC (uSPC) may be introduced in the future, but its expiry and enforcement rules are still under discussion .
