

What is the network cable in a network patch panel

Overview

A patch cable is a short Ethernet cable. Twisted-pair cables are used to make patch cables. These cables are typically used to connect network devices, such as switches, routers, and patch panels, or to link end-user devices like computers and phones. A network patch cable, often referred to as an Ethernet cable, is used to connect devices within a local area network (LAN). Its primary purpose is to facilitate the transmission of data between networked devices, such as computers, printers, routers, and switches. These cables are indispensable in. Ethernet RJ45 patch panel is an ideal method to create a flexible, reliable and tidy cabling system no matter for home network or data centers. Today, various styles of copper patch panels can be found in the market, such as shielded or unshielded patch panel, flat or angled patch panel, etc.
