

What s inside a relay protection cabinet

Overview

These are used to house a combination of 19" modular chassis, protection relays, switches, auxiliary relays, terminals, wiring and trunking. Cabinets and devices of relay protection and automation (RPA) manufactured by Radiy are a modern solution for control, automation, protection, monitoring and signaling at power facilities. They are used effectively in the following applications: This equipment is ideal for both newly constructed. Protection and control cabinets are electrical enclosures that house the hardware responsible for monitoring, controlling, and protecting power systems. Reliable components ensure system faultlessness and durability. The specification relates to the Onshore Compensation Compound (OCC) and Offshore Substation Platform (OSP).
