

Wiring of 2u distribution box

Article Overview

A 2U distribution box should be wired by connecting the main input, circuit breakers, outgoing circuits, and grounding according to standard electrical codes, ensuring safety and proper labeling.

Preparation and Safety

Before starting, turn off the main power supply to prevent electrical shock. Ensure you have the correct tools: wire strippers, screwdrivers, multimeter, cable ties, and appropriate wire gauges. Choose a dry, accessible location for the box, ideally around 1.5 meters from the floor, away from water, flammable materials, or corrosive substances () ().

Mounting the Box

Secure the 2U distribution box to a stable surface using expansion bolts or screws. Ensure it is level and firmly fixed to prevent movement during wiring ().

Wiring Steps

- **Wire Preparation:** Strip the insulation from the ends of each wire, leaving enough exposed conductor to make secure connections ().
- **Main Input Connection:** Connect the incoming live (brown or red), neutral (blue or black), and ground (green/yellow) wires to the main terminals of the distribution box ().
- **Circuit Breaker Installation:** Insert the appropriate circuit breakers into the slots. Each breaker should match the load requirements of its circuit ()....
